Experience

PayU **Jun 2025 – Present**

Software Engineer – Full Stack *Gurugram, Haryana*

- **Engineered payu-codex, a privacy-first MCP stdio server (Python) cutting Claude Code's token consumption by ∼60% across the 14-repo workspace — tree-sitter AST chunking (12 languages, 36k+ chunks), 768-dim Ollama embeddings in LanceDB, hybrid dense + BM25 + RRF retrieval, and watchdog-driven incremental reindexing with SHA-256 dedup; zero data egress.**
- **Replaced grep-first codebase exploration with natural-language semantic lookup by registering payu-codex as a Claude Code MCP server — four tools (search_code, find_symbol, find_usages, index_status) deliver meaning-level context over 36k+ symbols sub-second via local Ollama inference, eliminating the token-expensive Read/find loop.**
- **Shipped AI-powered brand customization flow in React/TypeScript, integrating a Toqan LLM agent to auto-extract merchant logos and colors from websites, driving 90% self-serve branded checkout adoption.**
- **Shipped Explore Products discovery MFE (React, Redux, single-spa) integrating activation-service, care-panel ticketing, and Clevertap analytics — lifting existing-merchant views 20% and new-merchant onboarding 3%.**
- **Shipped Subscription Plans and Revenue Recovery configuration UIs in React + RTK Query, exposing Smart, Custom, and No-Retry retry policies adopted by 2 enterprise e-commerce merchants in production.**
- **Integrated WhatsApp sharing into Payment Links via react-share with wa.me deep-links, lifting pre-expiry conversion 20% across the merchant Payment Links surface.**
- **Shipped Playwright E2E suite for the subscriptions microapp: GitLab CI pipeline, page-object model, auth setup project, and a co-change gate that blocks MRs adding untested surface.**

Jetapult **Feb 2025 – Apr 2025**

Full Stack Developer Intern *Remote*

- **Built an automated Google Play review-reply system using OpenAI API with dynamic prompt engineering per user rating — achieving 95%+ accuracy; automated via Cron jobs for consistent engagement at scale.**
- **Refactored frontend architecture by optimizing reusable components and state management, reducing code duplication by 30% and improving UI responsiveness.**

Technical Skills

Languages: TypeScript, JavaScript, Python, C++
Frontend: React, Redux, single-spa (MFE), Tailwind
Backend: FastAPI, REST APIs, PostgreSQL
AI/LLM: LLM Agents, Pydantic AI, Gemini, prompt engineering, MCP, RAG, LanceDB, Ollama
Infra/Testing: AWS, Playwright, GitLab CI/CD, Docker, Jenkins

Education

Ajay Kumar Garg Engineering College, Ghaziabad **Sep 2020 – Jun 2024**

Bachelor of Technology in Computer Science *Ghaziabad, U.P.*

Projects

Article-Review-Workspace | ***TypeScript, tRPC, Prisma ORM, PostgreSQL, NextAuth.js*** **Github**

- **Built EasySLR, a multi-tenant systematic literature review platform enabling organization-scoped project management and PubMed-style article ingestion with role-based access control.**
- **Implemented structured screening workflow with standardized review states (PENDING, INCLUDE, EXCLUDE, MAYBE), reviewer notes, and duplicate detection across uploads and existing datasets.**
- **Designed and deployed a production-grade Next.js + Prisma + PostgreSQL system with Excel import validation, audit-ready data pipelines, and Vercel + Neon cloud architecture.**

Achievements

Global Rank 75 in TCS Codevita'23 (Round 1) | Global Rank 608 in TECHGIG'23 Final.

Ranked 40 in CodeChef Starters 77 (18k+ participants) | 1700+ rating on LeetCode | 4* on CodeChef.
